```
b85 <- max(1:10)
b85
```

```
## [1] 10
```

9. *Print a vector with the integers between 1 and 100 that are not divisible by 3, 5 and 7 using filter option

```
filtnum <- Filter(function(i) { all(i %% c(3,5,7) != 0) }, seq(100))
filtnum
```

```
## [1] 1 2 4 8 11 13 16 17 19 22 23 26 29 31 32 34 37 38 41 43 44 46 47 52 53

```

10. Generate a sequence backwards of the integers from 1 to 100.

```
back <- sort(1:100, decreasing = TRUE)
back
```

```
## [1] 100 99 98 97 96 95 94 93 92 91 90 89 88 87 86 85 84 83
## [19] 82 81 80 79 78 77 76 75 74 73 72 71 70 69 68 67 66 65

## [55] 46 45 44 43 42 41 40 39 38 37 36 35 34 33 32 31 30 29
## [73] 28 27 26 25 24 23 22 21 20 19 18 17 16 15 14 13 12 11
```

```
## [91] 10 9 8 7 6 5 4 3 2 1
```

11. List all the natural numbers below 25 that are multiples of 3 or 5.

```
f11 <- Filter(function(i) { i %% 3 == 0 || i %% 5 == 0 }, seq(25))
f11
```

```
## [1] 3 5 6 9 10 12 15 18 20 21 24 25
```

Find the sum of these multiples

```
totf11f <- sum(f11)
totf11f
```

```
## [1] 168
```

```
b10 <- length(filtnum)
b10
```

```
## [1] 45
```

a. How many data points from 10 to 11

```
b11 <- length(f11)
b11
```

```
## [1] 12
```

12. Statements can be grouped together using braces '{' and '}'. A group of statements is sometimes called a block. Single statements are evaluated when a new line is typed at the end of the syntactically complete statement. Blocks are not evaluated until a new line is entered after the closing brace.

```
#x <- {0 + x + 5 + } (the code does not work because of a syntax error)#
```

13. *Set up a vector named score, consisting of 72, 86, 92, 63, 88, 89, 91, 92, 75, 75 and 77. To access individual elements of an atomic vector, one generally uses the x[i] construction

```
score <- c(72, 86, 92, 63, 88, 89, 91, 92, 75, 75, 77)
score[2]
```

```
## [1] 86
```

```
score[3]
```

```
## [1] 92
```

14. *Create a vector a = c(1,2,NA,4,NA,6,7).

a.

```
a = c(1,2,NA,4,NA,6,7)
print(a,na.print="-999")
```

```
## [1] 1 2 -999 4 -999 6 7
```

15. A special type of function calls can appear on the left hand side of the assignment operator as in >
class(x) <- "foo"

```
name = readline(prompt="Input your name: ")
```

```
## Input your name:
```

```
age = readline(prompt="Input your age: ")
```

```
## Input your age:
```

```
print(paste("My name is",name, "and I am",age ,"years old."))
```

```
## [1] "My name is  and I am  years old."
```

```
print(R.version.string)
```

```
## [1] "R version 4.4.1 (2024-06-14 ucrt)"
```

What is the output of the above code? -It asks the user to input their age and name then prints it in a format.
